## Basic functions:

- Around 20 Kg of feed capacity (according density).
- Possibility of constant level valve for water supply, freely available to the animal.
- Top of hopper and all other metal parts made in stainless steel.
- You are able to schedule up to 3 servings of feed every day by selecting each time and quantity.
- Battery is Included, to continue providing food, in case of electric power failure.
- If the power supply fails, it maintains the current time and the feed supply during approximately 5 days.
- The display lets you see selected times and selected quantities. By default, it always shows current time and next supplies.
- Display's backlight allows programming at night or with low light.
- A few seconds before each dose (selectable), it emits an audible signal (beep sound) to let the animal know that is going to receive feed.
- The machine includes a contact for activation of an alarm relay, for the (optional) connection of an external notice.
- Manual dosage is possible (push button activates the supply).
- Calibration of dose weight of the feed, if you use a food not included as market standard
- Several settings menus to be accessed by the key set by the user
- You are able to hang the controller on the wall, out of the reach of the animal.
